

Category	Description	Reviewers Comment	Action taken by reviewed group
Build	Could you clone from Git and build using the README file?	Yes, the setup is easy to follow.	None
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	Most of them are easy to follow, very classic node.js web application design, the workflow makes sense. Yes, they have very consistent lightning style, the variable names are also easy to understand.	None
Implementation	is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	Yes, except the drawing charts and histograms part, I feel like there should be some easy package from node.js they can use to draw that even with shorter code. Many abstractions are useful, like the way they handle back-end and frond-end and connect data is very solid.	None
Maintainability	Are there unit tests? Should there be? Is the test covering interesting cases? Are they readable?	No , the website is that big to handle too many things, no necessary for unit tests.	None
Requirements	Does the code fulfill the requirements?	Yes, pretty much. The style is consistent, the way the deal with web design is very solid. Except they have some problem with another functionality.	None
Other	Are there other things that stand out that can be improved?	Maybe make the frond-end looks better.	Improved front-end styling
