Code Review Feedback for CS17

Category	Description	Reviewers Comment	Action taken by reviewed group
Build	Could you clone from Git and build using the README file?	Yes, I was able to the Git repository as well as build the project only using the "Setup" guide under the README file. The guide was clear and easy to follow, it listed all of the appropriate steps to run the website.	None
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	Upon reviewing the code, I found it clean and easy to follow. Everything was spaced out and indented nicely, the variable names and methods are also relevant to the overall topic. In addition, I really like the comments on top of different sections that made it a lot easier for other people to understand the code.	None
Implementation	Is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see unnecessary abstractions?	I think the code is well written, I did not find any unnecessary code or functions that need to be shortened.	None
Maintainability	Are there unit tests? Should there be? Are the tests covering interesting cases? Are they readable?	There is no unit test that I was able to find in their Git repo. However, since it is web-based, I don't think unit test is necessary.	None
Requirements	Does the code fulfill the requirements?	The code does seem to fulfill the requirement document.	None
Other	Are there other things that stand out that can be improved?	Overall, I think the project is well done and nothing needs to be improved.	None
