

Category	Description	Reviewers Comment	Action taken by reviewed group
Build	Could you clone from Git and build using the README file?	Build appears to work from group demonstration.	None
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	Code appears well written and appears to follow guidelines and best practices.	None
Implementation	is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	Due to the nature of the project, there is not much room for improvement by changing the structure of the code, given that it appears to follow general guidelines for handling server and framework data.	None
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	Unit tests do not appear to be present, however given the nature of the requirements, they may not be the optimal solution. User and use case testing would likely be a better alternative.	None
Requirements	Does the code fulfill the requirements?	Code appears to fulfil its requirements.	None
Other	Are there other things that stand out that can be improved?	More commenting would be wise, and make it easier to understand your code. I know this is a running project, so documenting for future users is important.	Added more comments
